

PARTICIPATORY PROGRAM DESIGN & MONITORING

22 — 24 November 2010

8.30am—4.30pm
Monday to Wednesday

What is Participatory Program Design?

Drawing from **Program Logic**, **theories of change**, **Outcome Mapping** and in the context of **complexity**, the training will map out the key steps of participatory approaches to design your project or program. The training covers the key theoretical trends in international development program design, monitoring and evaluation. Students will learn practical methods and tools to work in teams, with partners and stakeholders. **Program logic** has come from the field of evaluation and is called 'clarification evaluation' as it maps out the program's design and clarifies the program through an interrogation of its logic i.e. will our activities actually lead to the desired outcomes and impact. **Outcome Mapping** is a participatory alternative to a Logical Framework that acknowledges complexity and focuses effort with our partners. This approach to program design forms the backbone of a monitoring and evaluation framework. The type of evaluation it uses is theory driven and evidence based.

What will be covered in the Course?

The training emphasizes a focus on people and how to work with our partners and stakeholders in a participatory way. Stakeholders and program staff develop the program design together. This leads to stakeholders and staff having a shared and unified understanding of the program.

This three day training presents program design in a participatory way through practical examples and exercises. The training is designed for active learning. At the end of the training the participants will:

- Understand key theoretical trends in international development
- Understand how Participatory Program Logic & Outcome Mapping work
- Understand the importance of mapping outcomes
- Articulate the change theory underlying programs
- Understand the importance on focusing on outcomes with partners
- Have developed some basic program designs (Maps)
- Understand how program design can be used in a participatory way to build your team and stakeholder relationships and engagement.

Monitoring and Evaluation Framework :

- Understand how program maps form the backbone of a Monitoring and Evaluation framework
- Understand how monitoring can be used for organizational learning and change
- Develop a basic monitoring framework focused on building teams and partner relationships
- Explore a number of practical monitoring and evaluation tools and methods including MSC

Hijau Biru:

Hijau Biru helps organisations design, monitor and evaluate wildly successful environmental and international development projects, programs and campaigns using participatory and dynamic methods. We run public training programs throughout Indonesia, Australia and South East Asia, and work in house and directly with communities for many types of NGOs and community organisations, international agencies, governments and the UN. We specialise in participatory approaches, program design, strategic planning for campaigns and advocacy groups, monitoring & evaluation, and team & capacity building. We like to bring out people's creativity and make it fun!

The Facilitators:

Natalie Moxham is a participatory facilitator specialising in participatory approaches in program design, monitoring and evaluation. She has extensive experience in community development, training, and in the MSC technique. She has coached diverse groups in program design and MSC including international development projects and community-based projects in the Asia Pacific. This includes taking a leading role in adapting the 'Most Significant Change' (MSC) technique for Indigenous contexts.

Alex Ryan is a participatory facilitator and environmental activist with experience ranging from sustainable community development, community-based natural resource management and forest conservation. Alex has worked for a range of NGOs in Southeast Asia and Australia, and has facilitation and training experience in this field. She is fluent in Indonesian, and is a certified interpreter/ translator with the Australian accreditation authority NAATI.

Location Details

Inna Sindhu Beach Hotel
Jl. Pantai Sindhu 14,
Sanur - Bali - Indonesia
Tel : [62] 361-288351

Cost (incl. lunch & coffee breaks)*

Local NGO	Rp. 4,500,000
International NGO	Rp. 6,700,000

* 10% discount for: more than one participant from the same organisation; attending the two courses. Accommodation package is an additional Rp. 150,000 per night, based on twin share (includes breakfast and dinner)
